## II. Code to edit and execute using the Code-along.Rmd file

### A. Data Wrangling

#### 1. Loading packages (Slide #16)

```
# Load package tidyverse  
library(tidyverse)
```

```
## -- Attaching core tidyverse packages ----- tidyverse 2.0.0 --  
## v dplyr      1.1.2      v readr      2.1.4  
## v forcats    1.0.0      v stringr   1.5.0  
## v ggplot2    3.4.3      v tibble    3.2.1  
## v lubridate  1.9.2      v tidyr     1.3.0  
## v purrr      1.0.2  
## -- Conflicts ----- tidyverse_conflicts() --  
## x dplyr::filter() masks stats::filter()  
## x dplyr::lag()     masks stats::lag()  
## i Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to become errors
```

#### 2. Loading data-set (Slide #16)

```
# Read data from the hotels.csv file and assign it to a variable named, "hotels"  
hotels <- read_csv("hotels.csv")
```

```
## Rows: 119390 Columns: 32  
## -- Column specification -----  
## Delimiter: ","  
## chr  (13): hotel, arrival_date_month, meal, country, market_segment, distrib...  
## dbl  (18): is_canceled, lead_time, arrival_date_year, arrival_date_week_numb...  
## date  (1): reservation_status_date  
##  
## i Use 'spec()' to retrieve the full column specification for this data.  
## i Specify the column types or set 'show_col_types = FALSE' to quiet this message.
```

### 3. List names of the variables in the data-set (Slide #19)

```
# Enter code here  
names(hotels)
```

```
## [1] "hotel" "is_canceled"
